

The `hypgotoe` package

Heiko Oberdiek*

2019/12/29 v0.3

Abstract

Experimental package for links to embedded files.

1 Documentation

1.1 Introduction

This is a first experiment for links to embedded files. The package `hypgotoe` is named after the PDF action name `/GoToE`. Feedback is welcome, especially to the user interface.

- Currently only embedded files and named destinations are supported.

*Please report any issues at <https://github.com/ho-tex/oberdiek/issues>

- Missing are support for destination arrays and attached files.
- Special characters aren't supported either.

In the future the package may be merged into package `hyperref`.

1.2 User interface

`\href` is extended to detect the prefix ‘`gotoe:`’. The part after the prefix is evaluated as key value list from left to right. For details, see “8.5.3 Action Types, Embedded Go-To Actions” [1].

dest: The destination name. The destination name can be set by `\hypertarget` in the target document. Or check the `.aux` file for destination names of `\label` commands. Also the target PDF file can be inspected, look for `/Dests` in the `/Names` entry of the catalog for named destinations. (Required.)

root: The file name of the root document. (Optional.)

parent: Go to the parent document. (No value, optional.)

embedded: Go to the embedded document. The value is the file name as it appears in `/EmbeddedFiles` of the current document.

The colors are controlled by `hyperref`'s options `gotoecolor` and `gotoebordercolor`. They can be set in `\hypersetup`, for example. Default is the color of file links.

1.3 Example

```

1 <*example>
2 \NeedsTeXFormat{LaTeX2e}
3 \RequirePackage{filecontents}
4 \begin{filecontents}{hypgtoe-child.tex}
5 \NeedsTeXFormat{LaTeX2e}
6 \documentclass{article}
7 \usepackage{hypgtoe}[2019/12/29]
8 \begin{document}
9 \section{This is the child document.}
10 \href{gotoe:}
11   dest={page.1},parent%
12 }{Go to first page of main document} \\
13 \href{gotoe:}
14   dest={page.2},parent%
15 }{Go to second page of main document}
16 \newpage
17 \section{This is the second page of the child document.}
18 \href{gotoe:}
19   dest={page.1},parent%
20 }{Go to first page of main document} \\
21 \href{gotoe:}
22   dest={page.2},parent%
23 }{Go to second page of main document}
24
25 \hypertarget{foobar}{}%
26 Anker foobar is here.
27 \end{document}
28 \end{filecontents}
29 \documentclass{article}
30 \usepackage{hypgtoe}[2019/12/29]
31 \usepackage{embedfile}
32 \IfFileExists{hypgtoe-child.pdf}{%
33   \embedfile{hypgtoe-child.pdf}%
34 }{%

```

```

35  \typeout{%
36  \typeout{--> Run hypgtoe-child.tex through pdflatex}%
37  \typeout{%
38 }
39 \begin{document}
40 \section{First page of main document}
41 \href{gotoe}{%
42   dest=page.1,embedded=hypgtoe-child.pdf%
43 }{Go to first page of child document} \\
44 \href{gotoe}{%
45   dest=page.2,embedded=hypgtoe-child.pdf%
46 }{Go to second page of child document} \\
47 \href{gotoe}{%
48   dest=foobar,embedded=hypgtoe-child.pdf%
49 }{Go to foobar in child document}
50 \newpage
51 \section{Second page of main document}
52 \href{gotoe}{%
53   dest=section.1,embedded=hypgtoe-child.pdf%
54 }{Go to first section of child document} \\
55 \href{gotoe}{%
56   dest=section.2,embedded=hypgtoe-child.pdf%
57 }{Go to second section of child document} \\
58 \href{gotoe}{%
59   dest=foobar,embedded=hypgtoe-child.pdf%
60 }{Go to foobar in child document}
61 \end{document}
62 
```

2 Implementation

2.1 Identification

```

63 <*package>
64 \NeedsTeXFormat{LaTeX2e}
65 \ProvidesPackage{hypgtoe}%
66 [2019/12/29 v0.3 Links to embedded files (HO)]%

```

2.2 Load packages

```

67 \RequirePackage{iftex}[2019/11/07]
68 \ifpdf
69 \else
70   \PackageError{hypgtoe}{%
71     Other drivers than pdfTeX in PDF mode are not supported.%
72     \MessageBreak
73     Package loading is aborted%
74   }{\@ehc
75   \expandafter\endinput
76 \fi
77 \RequirePackage{pdfescape}[2007/10/27]
78 \RequirePackage{hyperref}[2019/12/29]

```

2.3 Color support

```

79 \define@key{Hyp}{gotoebordercolor}{%
80   \HyColor@HyperrefBordercolor{#1}%
81   \gotoebordercolor{hyperref}{gotoebordercolor}%
82 }
83 \providecommand*{\@gotoecolor}{\@filecolor}
84 \providecommand*{\@gotoebordercolor}{\@filebordercolor}

```

2.4 Extend \href

```
\@hyper@readexternallink
```

```

85 \def\@hyper@readexternallink#1#2#3#4:#5:#6\#7{%
86   \ifx\#6\%
87     \expandafter\@hyper@linkfile file:#7\\{\#3}{\#2}%
88   \else
89     \ifx\#4\%
90       \expandafter\@hyper@linkfile file:#7\\{\#3}{\#2}%
91     \else

191 </package>

```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

¹CTAN:pkg/hypgtoe

[CTAN:macros/latex/contrib/oberdiek/hypgtoe.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/hypgtoe.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:pkg/tds](#)). Directories with `texmf` in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T_EX:

```
tex hypgtoe.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hypgtoe.sty</code>	→ <code>tex/latex/oberdiek/hypgtoe.sty</code>
<code>hypgtoe.pdf</code>	→ <code>doc/latex/oberdiek/hypgtoe.pdf</code>
<code>hypgtoe-example.tex</code>	→ <code>doc/latex/oberdiek/hypgtoe-example.tex</code>
<code>hypgtoe.dtx</code>	→ <code>source/latex/oberdiek/hypgtoe.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

3.4 Refresh file name databases

If your T_EX distribution (T_EX Live, MiK_TE_X, ...) relies on file name databases, you must refresh these. For example, T_EX Live users run `texhash` or `mktexlsr`.

3.5 Some details for the interested

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain T_EX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hypgtoe.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex hypgtoe.dtx
makeindex -s gind.ist hypgtoe.idx
pdflatex hypgtoe.dtx
makeindex -s gind.ist hypgtoe.idx
pdflatex hypgtoe.dtx
```
