## **CONTRIBUTORS**

The SUNDIALS library has been developed over many years by a number of contributors. The current SUNDIALS team consists of Cody J. Balos, David J. Gardner, Alan C. Hindmarsh, Daniel R. Reynolds, and Carol S. Woodward. We thank Radu Serban for significant and critical past contributions.

Other contributors to SUNDIALS include: James Almgren-Bell, Lawrence E. Banks, Peter N. Brown, George Byrne, Rujeko Chinomona, Scott D. Cohen, Aaron Collier, Keith E. Grant, Steven L. Lee, Shelby L. Lockhart, John Loffeld, Daniel McGreer, Yu Pan, Slaven Peles, Cosmin Petra, Steven B. Roberts, H. Hunter Schwartz, Jean M. Sexton, Dan Shumaker, Steve G. Smith, Shahbaj Sohal, Allan G. Taylor, Hilari C. Tiedeman, Chris White, Ting Yan, and Ulrike M. Yang.

# Chapter 1

## SUNDIALS Installation Procedure

The installation of any SUNDIALS package is accomplished by installing the SUNDIALS suite as a whole, according to the instructions that follow. The same procedure applies whether or not the downloaded file contains one or all solvers in SUNDIALS.

The SUNDIALS suite (or individual solvers) are distributed as compressed archives (`.tar.gz`). The name of the distribution archive is of the form `SOLVER-X.Y.Z.tar.gz`, where `SOLVER` is one of: `sundials`, `cvode`, `cvodes`, `arkode`, `ida`, `idas`, or `kinsol`, and `X.Y.Z` represents the version number (of the SUNDIALS suite or of the individual solver). To begin the installation, first uncompress and expand the sources, by issuing

```
% tar -zxf SOLVER-X.Y.Z.tar.gz
```

This will extract source files under a directory `SOLVER-X.Y.Z`.

Starting with version 2.6.0 of SUNDIALS, CMake is the only supported method of installation. The explanations of the installation procedure begin with a few common observations:

1. The remainder of this chapter will follow these conventions:

`SOLVERDIR` is the directory `SOLVER-X.Y.Z` created above; i.e. the directory containing the SUNDIALS sources.

`BUILDDIR` is the (temporary) directory under which SUNDIALS is built.

`INSTDIR` is the directory under which the SUNDIALS exported header files and libraries will be installed. Typically, header files are exported under a directory `INSTDIR/include` while libraries are installed under `INSTDIR/lib`, with `INSTDIR` specified at configuration time.

2. For SUNDIALS' CMake-based installation, in-source builds are prohibited; in other words, the build directory `BUILDDIR` can **not** be the same as `SOLVERDIR` and such an attempt will lead to an error. This prevents "polluting" the source tree and allows efficient builds for different configurations and/or options.
3. The installation directory `INSTDIR` can not be the same as the source directory `SOLVERDIR`.
4. By default, only the libraries and header files are exported to the installation directory `INSTDIR`. If enabled by the user (with the appropriate toggle for CMake), the examples distributed with SUNDIALS will be built together with the solver libraries but the installation step will result in exporting (by default in a subdirectory of the installation directory) the example sources and sample outputs together with automatically generated configuration files that reference the *installed* SUNDIALS headers and libraries. As such, these configuration files for the SUNDIALS examples can be used as "templates" for your own problems. CMake installs `CMakeLists.txt` files and also (as an option available only under Unix/Linux) `Makefile` files. Note this installation approach also allows the option of building the SUNDIALS examples without having to install them. (This can be used as a sanity check for the freshly built libraries.)

Further details on the CMake-based installation procedures, instructions for manual compilation, and a roadmap of the resulting installed libraries and exported header files, are provided in §1.1 and §1.2.

## 1.1 CMake-based installation

CMake-based installation provides a platform-independent build system. CMake can generate Unix and Linux Makefiles, as well as KDevelop, Visual Studio, and (Apple) XCode project files from the same configuration file. In addition, CMake also provides a GUI front end and which allows an interactive build and installation process.

The SUNDIALS build process requires CMake version 3.12.0 or higher and a working C compiler. On Unix-like operating systems, it also requires Make (and `curses`, including its development libraries, for the GUI front end to CMake, `ccmake` or `cmake-gui`), while on Windows it requires Visual Studio. While many Linux distributions offer CMake, the version included may be out of date. CMake adds new features regularly, and you should download the latest version from <http://www.cmake.org>. Build instructions for CMake (only necessary for Unix-like systems) can be found on the CMake website. Once CMake is installed, Linux/Unix users will be able to use `ccmake` or `cmake-gui` (depending on the version of CMake), while Windows users will be able to use `CMakeSetup`.

As previously noted, when using CMake to configure, build and install SUNDIALS, it is always required to use a separate build directory. While in-source builds are possible, they are explicitly prohibited by the SUNDIALS CMake scripts (one of the reasons being that, unlike autotools, CMake does not provide a `make distclean` procedure and it is therefore difficult to clean-up the source tree after an in-source build). By ensuring a separate build directory, it is an easy task for the user to clean-up all traces of the build by simply removing the build directory. CMake does generate a `make clean` which will remove files generated by the compiler and linker.

### 1.1.1 Configuring, building, and installing on Unix-like systems

The default CMake configuration will build all included solvers and associated examples and will build static and shared libraries. The `INSTDIR` defaults to `/usr/local` and can be changed by setting the `CMAKE_INSTALL_PREFIX` variable. Support for FORTRAN and all other options are disabled.

CMake can be used from the command line with the `cmake` command, or from a `curses`-based GUI by using the `ccmake` command, or from a `wxWidgets` or `QT` based GUI by using the `cmake-gui` command. Examples for using both text and graphical methods will be presented. For the examples shown it is assumed that there is a top level SUNDIALS directory with appropriate source, build and install directories:

```
$ mkdir (...)/INSTDIR
$ mkdir (...)/BUILDDIR
$ cd (...)/BUILDDIR
```

#### 1.1.1.1 Building with the GUI

Using CMake with the `ccmake` GUI follows the general process:

1. Select and modify values, run configure (c key)
2. New values are denoted with an asterisk
3. To set a variable, move the cursor to the variable and press enter
  - If it is a boolean (ON/OFF) it will toggle the value
  - If it is string or file, it will allow editing of the string
  - For file and directories, the `<tab>` key can be used to complete

4. Repeat until all values are set as desired and the generate option is available (g key)
5. Some variables (advanced variables) are not visible right away; to see advanced variables, toggle to advanced mode (t key)
6. To search for a variable press the / key, and to repeat the search, press the n key

Using CMake with the `cmake-gui` GUI follows a similar process:

1. Select and modify values, click **Configure**
2. The first time you click **Configure**, make sure to pick the appropriate generator (the following will assume generation of Unix Makefiles).
3. New values are highlighted in red
4. To set a variable, click on or move the cursor to the variable and press enter
  - If it is a boolean (ON/OFF) it will check/uncheck the box
  - If it is string or file, it will allow editing of the string. Additionally, an ellipsis button will appear ... on the far right of the entry. Clicking this button will bring up the file or directory selection dialog.
  - For files and directories, the <tab> key can be used to complete
5. Repeat until all values are set as desired and click the **Generate** button
6. Some variables (advanced variables) are not visible right away; to see advanced variables, click the advanced button

To build the default configuration using the curses GUI, from the `BUILDDIR` enter the `ccmake` command and point to the `SOLVERDIR`:

```
$ ccmake (...) /SOLVERDIR
```

Similarly, to build the default configuration using the wxWidgets GUI, from the `BUILDDIR` enter the `cmake-gui` command and point to the `SOLVERDIR`:

```
$ cmake-gui (...) /SOLVERDIR
```

The default curses configuration screen is shown in the following figure.

The default `INSTDIR` for both SUNDIALS and the corresponding examples can be changed by setting the `CMAKE_INSTALL_PREFIX` and the `EXAMPLES_INSTALL_PATH` as shown in the following figure.

Pressing the g key or clicking `generate` will generate Makefiles including all dependencies and all rules to build SUNDIALS on this system. Back at the command prompt, you can now run:

```
$ make
```

or for a faster parallel build (e.g. using 4 threads), you can run

```
$ make -j 4
```

To install SUNDIALS in the installation directory specified in the configuration, simply run:

```
$ make install
```

```

### 1.1.1.2 Building from the command line

Using CMake from the command line is simply a matter of specifying CMake variable settings with the `cmake` command. The following will build the default configuration:

```
$ cmake -DCMAKE_INSTALL_PREFIX=/home/myname/sundials/instdir \  
> -DEXAMPLES_INSTALL_PATH=/home/myname/sundials/instdir/examples \  
> ../srcdir  
$ make  
$ make install
```

### 1.1.2 Configuration options (Unix/Linux)

A complete list of all available options for a CMake-based SUNDIALS configuration is provide below. Note that the default values shown are for a typical configuration on a Linux system and are provided as illustration only.

#### **BUILD\_ARKODE**

Build the ARKODE library

Default: ON

#### **BUILD\_CVODE**

Build the CVODE library

Default: ON

#### **BUILD\_CVODES**

Build the CVODES library

Default: ON

#### **BUILD\_IDA**

Build the IDA library

Default: ON

#### **BUILD\_IDAS**

Build the IDAS library

Default: ON

#### **BUILD\_KINSOL**

Build the KINSOL library

Default: ON

#### **BUILD\_SHARED\_LIBS**

Build shared libraries

Default: ON

#### **BUILD\_STATIC\_LIBS**

Build static libraries

Default: ON

---

**CMAKE\_BUILD\_TYPE**

Choose the type of build, options are: None, Debug, Release, RelWithDebInfo, and MinSizeRel

Default:

---

**Note:** Specifying a build type will trigger the corresponding build type specific compiler flag options below which will be appended to the flags set by CMAKE\_<language>\_FLAGS.

---

**CMAKE\_C\_COMPILER**

C compiler

Default: /usr/bin/cc

**CMAKE\_C\_FLAGS**

Flags for C compiler

Default:

**CMAKE\_C\_FLAGS\_DEBUG**

Flags used by the C compiler during debug builds

Default: -g

**CMAKE\_C\_FLAGS\_MINSIZEREL**

Flags used by the C compiler during release minsize builds

Default: -Os -DNDEBUG

**CMAKE\_C\_FLAGS\_RELEASE**

Flags used by the C compiler during release builds

Default: -O3 -DNDEBUG

**CMAKE\_C\_STANDARD**

The C standard to build C parts of SUNDIALS with.

Default: 99

Options: 90, 99, 11, 17.

**CMAKE\_C\_EXTENSIONS**

Enable compiler specific C extensions.

Default: OFF

**CMAKE\_CXX\_COMPILER**

C++ compiler

Default: /usr/bin/c++

---

**Note:** A C++ compiler is only required when a feature requiring C++ is enabled (e.g., CUDA, HIP, SYCL, RAJA, etc.) or the C++ examples are enabled.

All SUNDIALS solvers can be used from C++ applications without setting any additional configuration options.

---

**CMAKE\_CXX\_FLAGS**

Flags for C++ compiler

Default:

**CMAKE\_CXX\_FLAGS\_DEBUG**

Flags used by the C++ compiler during debug builds

Default: -g

**CMAKE\_CXX\_FLAGS\_MINSIZEREL**

Flags used by the C++ compiler during release minsize builds

Default: -Os -DNDEBUG

**CMAKE\_CXX\_FLAGS\_RELEASE**

Flags used by the C++ compiler during release builds

Default: -O3 -DNDEBUG

**CMAKE\_CXX\_STANDARD**

The C++ standard to build C++ parts of SUNDIALS with.

Default: 11

Options: 98, 11, 14, 17, 20.

**CMAKE\_CXX\_EXTENSIONS**

Enable compiler specific C++ extensions.

Default: OFF

**CMAKE\_Fortran\_COMPILER**

Fortran compiler

Default: /usr/bin/gfortran

---

**Note:** Fortran support (and all related options) are triggered only if either Fortran-C support (BUILD\_FORTRAN\_MODULE\_INTERFACE) or LAPACK (ENABLE\_LAPACK) support is enabled.

---

**CMAKE\_Fortran\_FLAGS**

Flags for Fortran compiler

Default:

**CMAKE\_Fortran\_FLAGS\_DEBUG**

Flags used by the Fortran compiler during debug builds

Default: -g

**CMAKE\_Fortran\_FLAGS\_MINSIZEREL**

Flags used by the Fortran compiler during release minsize builds

Default: -Os

**CMAKE\_Fortran\_FLAGS\_RELEASE**

Flags used by the Fortran compiler during release builds

Default: -O3

**CMAKE\_INSTALL\_LIBDIR**

The directory under which libraries will be installed.

Default: Set based on the system: lib, lib64, or lib/<multiarch-tuple>

**CMAKE\_INSTALL\_PREFIX**

Install path prefix, prepended onto install directories

Default: /usr/local

---

**Note:** The user must have write access to the location specified through this option. Exported SUNDIALS header files and libraries will be installed under subdirectories `include` and `lib` of `CMAKE_INSTALL_PREFIX`, respectively.

---

**ENABLE\_CUDA**

Build the SUNDIALS CUDA modules.

Default: OFF

**CMAKE\_CUDA\_ARCHITECTURES**

Specifies the CUDA architecture to compile for.

Default: sm\_30

**ENABLE\_XBRAID**

Enable or disable the ARKStep + XBraid interface.

Default: OFF

---

**Note:** See additional information on building with *XBraid* enabled in §1.1.4.

---

**EXAMPLES\_ENABLE\_C**

Build the SUNDIALS C examples

Default: ON

**EXAMPLES\_ENABLE\_CXX**

Build the SUNDIALS C++ examples

Default: OFF

**EXAMPLES\_ENABLE\_CUDA**

Build the SUNDIALS CUDA examples

Default: OFF

---

**Note:** You need to enable CUDA support to build these examples.

---

**EXAMPLES\_ENABLE\_F2003**

Build the SUNDIALS Fortran2003 examples

Default: ON (if `BUILD_FORTRAN_MODULE_INTERFACE` is ON)

**EXAMPLES\_INSTALL**

Install example files

Default: ON

---

**Note:** This option is triggered when any of the SUNDIALS example programs are enabled (`EXAMPLES_ENABLE_<language>` is ON). If the user requires installation of example programs then the sources and sample

---

output files for all SUNDIALS modules that are currently enabled will be exported to the directory specified by `EXAMPLES_INSTALL_PATH`. A CMake configuration script will also be automatically generated and exported to the same directory. Additionally, if the configuration is done under a Unix-like system, makefiles for the compilation of the example programs (using the installed SUNDIALS libraries) will be automatically generated and exported to the directory specified by `EXAMPLES_INSTALL_PATH`.

---

#### **EXAMPLES\_INSTALL\_PATH**

Output directory for installing example files

Default: `/usr/local/examples`

---

**Note:** The actual default value for this option will be an `examples` subdirectory created under `CMAKE_INSTALL_PREFIX`.

---

#### **BUILD\_FORTRAN\_MODULE\_INTERFACE**

Enable Fortran 2003 interface

Default: OFF

#### **ENABLE\_GINKGO**

Enable interfaces to the Ginkgo linear algebra library.

Default: OFF

#### **Ginkgo\_DIR**

Path to the Ginkgo installation.

Default: None

#### **SUNDIALS\_GINKGO\_BACKENDS**

Semi-colon separated list of Ginkgo target architectures/executors to build for. Options currently supported are REF (the Ginkgo reference executor), OMP, CUDA, HIP, and DPC++.

Default: "REF;OMP"

#### **ENABLE\_KOKKOS**

Enable the Kokkos based vector.

Default: OFF

#### **Kokkos\_DIR**

Path to the Kokkos installation.

Default: None

#### **ENABLE\_KOKKOS\_KERNELS**

Enable the Kokkos based dense matrix and linear solver.

Default: OFF

#### **KokkosKernels\_DIR**

Path to the Kokkos-Kernels installation.

Default: None

#### **ENABLE\_HYPRE**

Flag to enable *hypre* support

Default: OFF

---

**Note:** See additional information on building with *hypre* enabled in §1.1.4.

---

**HYPRE\_INCLUDE\_DIR**

Path to *hypre* header files

Default: none

**HYPRE\_LIBRARY**

Path to *hypre* installed library files

Default: none

**ENABLE\_KLU**

Enable KLU support

Default: OFF

---

**Note:** See additional information on building with KLU enabled in §1.1.4.

---

**KLU\_INCLUDE\_DIR**

Path to SuiteSparse header files

Default: none

**KLU\_LIBRARY\_DIR**

Path to SuiteSparse installed library files

Default: none

**ENABLE\_LAPACK**

Enable LAPACK support

Default: OFF

---

**Note:** Setting this option to ON will trigger additional CMake options. See additional information on building with LAPACK enabled in §1.1.4.

---

**LAPACK\_LIBRARIES**

LAPACK (and BLAS) libraries

Default: /usr/lib/liblapack.so;/usr/lib/libblas.so

---

**Note:** CMake will search for libraries in your LD\_LIBRARY\_PATH prior to searching default system paths.

---

**ENABLE\_MAGMA**

Enable MAGMA support.

Default: OFF

---

**Note:** Setting this option to ON will trigger additional options related to MAGMA.

---

**MAGMA\_DIR**

Path to the root of a MAGMA installation.

Default: none

**SUNDIALS\_MAGMA\_BACKENDS**

Which MAGMA backend to use under the SUNDIALS MAGMA interface.

Default: CUDA

**ENABLE\_MPI**

Enable MPI support. This will build the parallel nvector and the MPI-aware version of the ManyVector library.

Default: OFF

---

**Note:** Setting this option to ON will trigger several additional options related to MPI.

---

**MPI\_C\_COMPILER**

mpicc program

Default:

**MPI\_CXX\_COMPILER**

mpicxx program

Default:

---

**Note:** This option is triggered only if MPI is enabled (ENABLE\_MPI is ON) and C++ examples are enabled (EXAMPLES\_ENABLE\_CXX is ON). All SUNDIALS solvers can be used from C++ MPI applications by default without setting any additional configuration options other than ENABLE\_MPI.

---

**MPI\_Fortran\_COMPILER**

mpif90 program

Default:

---

**Note:** This option is triggered only if MPI is enabled (ENABLE\_MPI is ON) and Fortran-C support is enabled (EXAMPLES\_ENABLE\_F2003 is ON).

---

**MPIEXEC\_EXECUTABLE**

Specify the executable for running MPI programs

Default: mpirun

---

**Note:** This option is triggered only if MPI is enabled (ENABLE\_MPI is ON).

---

**ENABLE\_ONEMKL**

Enable oneMKL support.

Default: OFF

**ONEMKL\_DIR**

Path to oneMKL installation.

Default: none

**SUNDIALS\_ONEMKL\_USE\_GETRF\_LOOP**

This advanced debugging option replaces the batched LU factorization with a loop over each system in the batch and a non-batched LU factorization.

Default: OFF

**SUNDIALS\_ONEMKL\_USE\_GETRS\_LOOP**

This advanced debugging option replaces the batched LU solve with a loop over each system in the batch and a non-batched solve.

Default: OFF

**ENABLE\_OPENMP**

Enable OpenMP support (build the OpenMP NVector)

Default: OFF

**ENABLE\_PETSC**

Enable PETSc support

Default: OFF

---

**Note:** See additional information on building with PETSc enabled in §1.1.4.

---

**PETSC\_DIR**

Path to PETSc installation

Default: none

**PETSC\_LIBRARIES**

Semi-colon separated list of PETSc link libraries. Unless provided by the user, this is autopopulated based on the PETSc installation found in PETSC\_DIR.

Default: none

**PETSC\_INCLUDES**

Semi-colon separated list of PETSc include directories. Unless provided by the user, this is autopopulated based on the PETSc installation found in PETSC\_DIR.

Default: none

**ENABLE\_PTHREAD**

Enable Pthreads support (build the Pthreads NVector)

Default: OFF

**ENABLE\_RAJA**

Enable RAJA support.

Default: OFF

---

**Note:** You need to enable CUDA or HIP in order to build the RAJA vector module.

---

#### **SUNDIALS\_RAJA\_BACKENDS**

If building SUNDIALS with RAJA support, this sets the RAJA backend to target. Values supported are CUDA, HIP, or SYCL.

Default: CUDA

#### **ENABLE\_SUPERLUDIST**

Enable SuperLU\_DIST support

Default: OFF

---

**Note:** See additional information on building with SuperLU\_DIST enabled in §1.1.4.

---

#### **SUPERLUDIST\_DIR**

Path to SuperLU\_DIST installation.

Default: none

#### **SUPERLUDIST\_OpenMP**

Enable SUNDIALS support for SuperLU\_DIST built with OpenMP

Default: none

Note: SuperLU\_DIST must be built with OpenMP support for this option to function. Additionally the environment variable OMP\_NUM\_THREADS must be set to the desired number of threads.

#### **SUPERLUDIST\_INCLUDE\_DIRS**

List of include paths for SuperLU\_DIST (under a typical SuperLU\_DIST install, this is typically the SuperLU\_DIST SRC directory)

Default: none

---

**Note:** This is an advanced option. Prefer to use *SUPERLUDIST\_DIR*.

---

#### **SUPERLUDIST\_LIBRARIES**

Semi-colon separated list of libraries needed for SuperLU\_DIST

Default: none

---

**Note:** This is an advanced option. Prefer to use *SUPERLUDIST\_DIR*.

---

#### **SUPERLUDIST\_INCLUDE\_DIR**

Path to SuperLU\_DIST header files (under a typical SuperLU\_DIST install, this is typically the SuperLU\_DIST SRC directory)

Default: none

---

**Note:** This is an advanced option. This option is deprecated. Use *SUPERLUDIST\_INCLUDE\_DIRS*.

---

#### **SUPERLUDIST\_LIBRARY\_DIR**

Path to SuperLU\_DIST installed library files

Default: none

---

**Note:** This option is deprecated. Use `SUPERLUDIST_DIR`.

---

**ENABLE\_SUPERLUMT**

Enable SuperLU\_MT support

Default: OFF

---

**Note:** See additional information on building with SuperLU\_MT enabled in §1.1.4.

---

**SUPERLUMT\_INCLUDE\_DIR**

Path to SuperLU\_MT header files (under a typical SuperLU\_MT install, this is typically the SuperLU\_MT SRC directory)

Default: none

**SUPERLUMT\_LIBRARY\_DIR**

Path to SuperLU\_MT installed library files

Default: none

**SUPERLUMT\_THREAD\_TYPE**

Must be set to Pthread or OpenMP, depending on how SuperLU\_MT was compiled.

Default: Pthread

**ENABLE\_SYCL**

Enable SYCL support.

Default: OFF

---

**Note:** CMake does not currently support autodetection of SYCL compilers and `CMAKE_CXX_COMPILER` must be set to a valid SYCL compiler. At present the only supported SYCL compilers are the Intel oneAPI compilers i.e., `dpcpp` and `icpx`. When using `icpx` the `-fsycl` flag and any ahead of time compilation flags must be added to `CMAKE_CXX_FLAGS`.

---

**SUNDIALS\_SYCL\_2020\_UNSUPPORTED**

This advanced option disables the use of *some* features from the SYCL 2020 standard in SUNDIALS libraries and examples. This can be used to work around some cases of incomplete compiler support for SYCL 2020.

Default: OFF

**SUNDIALS\_LOGGING\_LEVEL**

Set the maximum logging level for the SUNLogger runtime API. The higher this is set, the more output that may be logged, and the more performance may degrade. The options are:

- 0 – no logging
- 1 – log errors
- 2 – log errors + warnings
- 3 – log errors + warnings + informational output
- 4 – log errors + warnings + informational output + debug output
- 5 – log all of the above and even more (e.g. vector valued variables may be logged)

Default: 0

#### **SUNDIALS\_LOGGING\_ENABLE\_MPI**

Enables MPI support in the SUNLogger runtime API. I.e., makes the logger MPI aware and capable of outputting only on specific ranks.

Default: OFF

---

**Note:** The logger may be used in an MPI application without MPI support turned on, but it will output on all ranks.

---

#### **SUNDIALS\_BUILD\_WITH\_MONITORING**

Build SUNDIALS with capabilities for fine-grained monitoring of solver progress and statistics. This is primarily useful for debugging.

Default: OFF

<p><b>Warning:</b> Building with monitoring may result in minor performance degradation even if monitoring is not utilized.</p>
---

#### **SUNDIALS\_BUILD\_WITH\_PROFILING**

Build SUNDIALS with capabilities for fine-grained profiling.

Default: OFF

<p><b>Warning:</b> Profiling will impact performance, and should be enabled judiciously.</p>
--

#### **ENABLE\_CALIPER**

Enable CALIPER support

Default: OFF

---

**Note:** Using Caliper requires setting *SUNDIALS\_BUILD\_WITH\_PROFILING* to ON.

---

#### **CALIPER\_DIR**

Path to the root of a Caliper installation

Default: None

#### **SUNDIALS\_F77\_FUNC\_CASE**

Specify the case to use in the Fortran name-mangling scheme, options are: `lower` or `upper`

Default:

---

**Note:** The build system will attempt to infer the Fortran name-mangling scheme using the Fortran compiler. This option should only be used if a Fortran compiler is not available or to override the inferred or default (`lower`) scheme if one can not be determined. If used, *SUNDIALS\_F77\_FUNC\_UNDERSCORES* must also be set.

---

**SUNDIALS\_F77\_FUNC\_UNDERSCORES**

Specify the number of underscores to append in the Fortran name-mangling scheme, options are: none, one, or two

Default:

---

**Note:** The build system will attempt to infer the Fortran name-mangling scheme using the Fortran compiler. This option should only be used if a Fortran compiler is not available or to override the inferred or default (one) scheme if one can not be determined. If used, `SUNDIALS_F77_FUNC_CASE` must also be set.

---

**SUNDIALS\_INDEX\_TYPE**

Integer type used for SUNDIALS indices. The size must match the size provided for the `SUNDIALS_INDEX_SIZE` option.

Default: Automatically determined based on `SUNDIALS_INDEX_SIZE`

---

**Note:** In past SUNDIALS versions, a user could set this option to `INT64_T` to use 64-bit integers, or `INT32_T` to use 32-bit integers. Starting in SUNDIALS 3.2.0, these special values are deprecated. For SUNDIALS 3.2.0 and up, a user will only need to use the `SUNDIALS_INDEX_SIZE` option in most cases.

---

**SUNDIALS\_INDEX\_SIZE**

Integer size (in bits) used for indices in SUNDIALS, options are: 32 or 64

Default: 64

---

**Note:** The build system tries to find an integer type of appropriate size. Candidate 64-bit integer types are (in order of preference): `int64_t`, `__int64`, `long long`, and `long`. Candidate 32-bit integers are (in order of preference): `int32_t`, `int`, and `long`. The advanced option, `SUNDIALS_INDEX_TYPE` can be used to provide a type not listed here.

---

**SUNDIALS\_MATH\_LIBRARY**

The standard C math library (e.g., `libm`) to link with.

Default: `-lm` on Unix systems, none otherwise

**SUNDIALS\_PRECISION**

The floating-point precision used in SUNDIALS packages and class implementations, options are: `double`, `single`, or `extended`

Default: `double`

**SUNDIALS\_INSTALL\_CMAKEDIR**

Installation directory for the SUNDIALS cmake files (relative to `CMAKE_INSTALL_PREFIX`).

Default: `CMAKE_INSTALL_PREFIX/cmake/sundials`

**USE\_GENERIC\_MATH**

Link to `SUNDIALS_MATH_LIBRARY`, which defaults to `libm` on Unix systems.

Default: `ON`

---

**Note:** This option is deprecated. Use `SUNDIALS_MATH_LIBRARY`.

---

**XBRAID\_DIR**

The root directory of the XBraid installation.

Default: OFF

**XBRAID\_INCLUDES**

Semi-colon separated list of XBraid include directories. Unless provided by the user, this is autopopulated based on the XBraid installation found in `XBRAID_DIR`.

Default: none

**XBRAID\_LIBRARIES**

Semi-colon separated list of XBraid link libraries. Unless provided by the user, this is autopopulated based on the XBraid installation found in `XBRAID_DIR`.

Default: none

**USE\_XSDK\_DEFAULTS**

Enable xSDK (see <https://xsdk.info> for more information) default configuration settings. This sets `CMAKE_BUILD_TYPE` to Debug, `SUNDIALS_INDEX_SIZE` to 32 and `SUNDIALS_PRECISION` to double.

Default: OFF

### 1.1.3 Configuration examples

The following examples will help demonstrate usage of the CMake configure options.

To configure SUNDIALS using the default C and Fortran compilers, and default `mpicc` and `mpif90` parallel compilers, enable compilation of examples, and install libraries, headers, and example sources under subdirectories of `/home/myname/sundials/`, use:

```
% cmake \  
> -DCMAKE_INSTALL_PREFIX=/home/myname/sundials/instdir \  
> -DEXAMPLES_INSTALL_PATH=/home/myname/sundials/instdir/examples \  
> -DENABLE_MPI=ON \  
> /home/myname/sundials/srcdir  
  
% make install
```

To disable installation of the examples, use:

```
% cmake \  
> -DCMAKE_INSTALL_PREFIX=/home/myname/sundials/instdir \  
> -DEXAMPLES_INSTALL_PATH=/home/myname/sundials/instdir/examples \  
> -DENABLE_MPI=ON \  
> -DEXAMPLES_INSTALL=OFF \  
> /home/myname/sundials/srcdir  
  
% make install
```

## 1.1.4 Working with external Libraries

The SUNDIALS suite contains many options to enable implementation flexibility when developing solutions. The following are some notes addressing specific configurations when using the supported third party libraries.

### 1.1.4.1 Building with Ginkgo

**Ginkgo** is a high-performance linear algebra library for manycore systems, with a focus on solving sparse linear systems. It is implemented using modern C++ (you will need at least a C++14 compliant compiler to build it), with GPU kernels implemented in CUDA (for NVIDIA devices), HIP (for AMD devices) and SYCL/DPC++ (for Intel devices and other supported hardware). To enable Ginkgo in SUNDIALS, set the `ENABLE_GINKGO` to ON and provide the path to the root of the Ginkgo installation in `Ginkgo_DIR`. Additionally, `SUNDIALS_GINKGO_BACKENDS` must be set to a list of Ginkgo target architectures/executors. E.g.,

```
% cmake \
> -DENABLE_GINKGO=ON \
> -DGinkgo_DIR=/path/to/ginkgo/installation \
> -DSUNDIALS_GINKGO_BACKENDS="REF;OMP;CUDA" \
> /home/myname/sundials/srcdir
```

The SUNDIALS interfaces to Ginkgo are not compatible with `SUNDIALS_PRECISION` set to `extended`.

### 1.1.4.2 Building with Kokkos

**Kokkos** is a modern C++ (requires at least C++14) programming model for writing performance portable code for multi-core CPU and GPU-based systems including NVIDIA, AMD, and Intel accelerators. To enable Kokkos in SUNDIALS, set the `ENABLE_KOKKOS` to ON and provide the path to the root of the Kokkos installation in `Kokkos_DIR`. Additionally, the **Kokkos-Kernels** library provides common computational kernels for linear algebra. To enable Kokkos-Kernels in SUNDIALS, set the `ENABLE_KOKKOS_KERNELS` to ON and provide the path to the root of the Kokkos-Kernels installation in `KokkosKernels_DIR` e.g.,

```
% cmake \
> -DENABLE_KOKKOS=ON \
> -DKokkos_DIR=/path/to/kokkos/installation \
> -DENABLE_KOKKOS_KERNELS=ON \
> -DKokkosKernels_DIR=/path/to/kokkoskernels/installation \
> /home/myname/sundials/srcdir
```

---

**Note:** The minimum supported version of Kokkos-Kernels 3.7.00.

---

### 1.1.4.3 Building with LAPACK

To enable LAPACK, set the `ENABLE_LAPACK` option to ON. If the directory containing the LAPACK library is in the `LD_LIBRARY_PATH` environment variable, CMake will set the `LAPACK_LIBRARIES` variable accordingly, otherwise CMake will attempt to find the LAPACK library in standard system locations. To explicitly tell CMake what library to use, the `LAPACK_LIBRARIES` variable can be set to the desired libraries required for LAPACK.

```
% cmake \
> -DCMAKE_INSTALL_PREFIX=/home/myname/sundials/instdir \
> -DEXAMPLES_INSTALL_PATH=/home/myname/sundials/instdir/examples \
```

(continues on next page)

(continued from previous page)

```
> -DENABLE_LAPACK=ON \  
> -DLAPACK_LIBRARIES=/mylapackpath/lib/libblas.so;/mylapackpath/lib/liblapack.so \  
> /home/myname/sundials/srcdir  
  
% make install
```

---

**Note:** If a working Fortran compiler is not available to infer the Fortran name-mangling scheme, the options `SUNDIALS_F77_FUNC_CASE` and `SUNDIALS_F77_FUNC_UNDERSCORES` *must* be set in order to bypass the check for a Fortran compiler and define the name-mangling scheme. The defaults for these options in earlier versions of SUNDIALS were `lower` and `one`, respectively.

---

SUNDIALS has been tested with OpenBLAS 0.3.18.

#### 1.1.4.4 Building with KLU

KLU is a software package for the direct solution of sparse nonsymmetric linear systems of equations that arise in circuit simulation and is part of SuiteSparse, a suite of sparse matrix software. The library is developed by Texas A&M University and is available from the [SuiteSparse GitHub repository](#).

To enable KLU, set `ENABLE_KLU` to `ON`, set `KLU_INCLUDE_DIR` to the `include` path of the KLU installation and set `KLU_LIBRARY_DIR` to the `lib` path of the KLU installation. The CMake configure will result in populating the following variables: `AMD_LIBRARY`, `AMD_LIBRARY_DIR`, `BTF_LIBRARY`, `BTF_LIBRARY_DIR`, `COLAMD_LIBRARY`, `COLAMD_LIBRARY_DIR`, and `KLU_LIBRARY`.

SUNDIALS has been tested with SuiteSparse version 5.10.1.

#### 1.1.4.5 Building with SuperLU\_DIST

SuperLU\_DIST is a general purpose library for the direct solution of large, sparse, nonsymmetric systems of linear equations in a distributed memory setting. The library is developed by Lawrence Berkeley National Laboratory and is available from the [SuperLU\\_DIST GitHub repository](#).

To enable SuperLU\_DIST, set `ENABLE_SUPERLUDIST` to `ON`, set `SUPERLUDIST_DIR` to the path where SuperLU\_DIST is installed. If SuperLU\_DIST was built with OpenMP then the option `SUPERLUDIST_OpenMP` and `ENABLE_OPENMP` should be set to `ON`.

SUNDIALS supports SuperLU\_DIST v7.0.0 – v8.x.x and has been tested with v7.2.0 and v8.1.0.

#### 1.1.4.6 Building with SuperLU\_MT

SuperLU\_MT is a general purpose library for the direct solution of large, sparse, nonsymmetric systems of linear equations on shared memory parallel machines. The library is developed by Lawrence Berkeley National Laboratory and is available from the [SuperLU\\_MT GitHub repository](#).

To enable SuperLU\_MT, set `ENABLE_SUPERLUMT` to `ON`, set `SUPERLUMT_INCLUDE_DIR` to the `SRC` path of the SuperLU\_MT installation, and set the variable `SUPERLUMT_LIBRARY_DIR` to the `lib` path of the SuperLU\_MT installation. At the same time, the variable `SUPERLUMT_LIBRARIES` must be set to a semi-colon separated list of other libraries SuperLU\_MT depends on. For example, if SuperLU\_MT was build with an external blas library, then include the full path to the blas library in this list. Additionally, the variable `SUPERLUMT_THREAD_TYPE` must be set to either `Pthread` or `OpenMP`.

Do not mix thread types when building SUNDIALS solvers. If threading is enabled for SUNDIALS by having either `ENABLE_OPENMP` or `ENABLE_PTHREAD` set to `ON` then `SuperLU_MT` should be set to use the same threading type.

SUNDIALS has been tested with `SuperLU_MT` version 3.1.

#### 1.1.4.7 Building with PETSc

The Portable, Extensible Toolkit for Scientific Computation (PETSc) is a suite of data structures and routines for simulating applications modeled by partial differential equations. The library is developed by Argonne National Laboratory and is available from the [PETSc GitLab repository](#).

To enable PETSc, set `ENABLE_PETSC` to `ON`, and set `PETSC_DIR` to the path of the PETSc installation. Alternatively, a user can provide a list of include paths in `PETSC_INCLUDES` and a list of complete paths to the PETSc libraries in `PETSC_LIBRARIES`.

SUNDIALS is regularly tested with the latest PETSc versions, specifically up to version 3.18.1 as of SUNDIALS version v6.6.0. SUNDIALS requires PETSc 3.5.0 or newer.

#### 1.1.4.8 Building with hypre

*hypre* is a library of high performance preconditioners and solvers featuring multigrid methods for the solution of large, sparse linear systems of equations on massively parallel computers. The library is developed by Lawrence Livermore National Laboratory and is available from the [hypre GitHub repository](#).

To enable *hypre*, set `ENABLE_HYPRE` to `ON`, set `HYPRE_INCLUDE_DIR` to the `include` path of the *hypre* installation, and set the variable `HYPRE_LIBRARY_DIR` to the `lib` path of the *hypre* installation.

---

**Note:** SUNDIALS must be configured so that `SUNDIALS_INDEX_SIZE` is compatible with `HYPRE_BigInt` in the *hypre* installation.

---

SUNDIALS is regularly tested with the latest versions of *hypre*, specifically up to version 2.26.0 as of SUNDIALS version v6.6.0.

#### 1.1.4.9 Building with MAGMA

The Matrix Algebra on GPU and Multicore Architectures (MAGMA) project provides a dense linear algebra library similar to LAPACK but targeting heterogeneous architectures. The library is developed by the University of Tennessee and is available from the [UTK webpage](#).

To enable the SUNDIALS MAGMA interface set `ENABLE_MAGMA` to `ON`, `MAGMA_DIR` to the MAGMA installation path, and `SUNDIALS_MAGMA_BACKENDS` to the desired MAGMA backend to use with SUNDIALS e.g., `CUDA` or `HIP`.

SUNDIALS has been tested with MAGMA version v2.6.1 and v2.6.2.

#### 1.1.4.10 Building with oneMKL

The Intel [oneAPI Math Kernel Library \(oneMKL\)](#) includes CPU and DPC++ interfaces for LAPACK dense linear algebra routines. The SUNDIALS oneMKL interface targets the DPC++ routines, to utilize the CPU routine see §1.1.4.3.

To enable the SUNDIALS oneMKL interface set `ENABLE_ONEMKL` to `ON` and `ONEMKL_DIR` to the oneMKL installation path.

SUNDIALS has been tested with oneMKL version 2021.4.

#### 1.1.4.11 Building with CUDA

The NVIDIA CUDA Toolkit provides a development environment for GPU-accelerated computing with NVIDIA GPUs. The CUDA Toolkit and compatible NVIDIA drivers are available from the [NVIDIA developer website](#).

To enable CUDA, set `ENABLE_CUDA` to `ON`. If CUDA is installed in a nonstandard location, you may be prompted to set the variable `CUDA_TOOLKIT_ROOT_DIR` with your CUDA Toolkit installation path. To enable CUDA examples, set `EXAMPLES_ENABLE_CUDA` to `ON`.

SUNDIALS has been tested with the CUDA toolkit versions 10 and 11.

#### 1.1.4.12 Building with RAJA

RAJA is a performance portability layer developed by Lawrence Livermore National Laboratory and can be obtained from the [RAJA GitHub repository](#).

Building SUNDIALS RAJA modules requires a CUDA, HIP, or SYCL enabled RAJA installation. To enable RAJA, set `ENABLE_RAJA` to `ON`, set `SUNDIALS_RAJA_BACKENDS` to the desired backend (CUDA, HIP, or SYCL), and set `ENABLE_CUDA`, `ENABLE_HIP`, or `ENABLE_SYCL` to `ON` depending on the selected backend. If RAJA is installed in a nonstandard location you will be prompted to set the variable `RAJA_DIR` with the path to the RAJA CMake configuration file. To enable building the RAJA examples set `EXAMPLES_ENABLE_CXX` to `ON`.

SUNDIALS has been tested with RAJA version 0.14.0.

#### 1.1.4.13 Building with XBraid

XBraid is parallel-in-time library implementing an optimal-scaling multigrid reduction in time (MGRIT) solver. The library is developed by Lawrence Livermore National Laboratory and is available from the [XBraid GitHub repository](#).

To enable XBraid support, set `ENABLE_XBRAID` to `ON`, set `XBRAID_DIR` to the root install location of XBraid or the location of the clone of the XBraid repository.

---

**Note:** At this time the XBraid types `braid_Int` and `braid_Real` are hard-coded to `int` and `double` respectively. As such SUNDIALS must be configured with `SUNDIALS_INDEX_SIZE` set to 32 and `SUNDIALS_PRECISION` set to `double`. Additionally, SUNDIALS must be configured with `ENABLE_MPI` set to `ON`.

---

SUNDIALS has been tested with XBraid version 3.0.0.

## 1.1.5 Testing the build and installation

If SUNDIALS was configured with `EXAMPLES_ENABLE_<language>` options to `ON`, then a set of regression tests can be run after building with the `make` command by running:

```
% make test
```

Additionally, if `EXAMPLES_INSTALL` was also set to `ON`, then a set of smoke tests can be run after installing with the `make install` command by running:

```
% make test_install
```

## 1.1.6 Building and Running Examples

Each of the SUNDIALS solvers is distributed with a set of examples demonstrating basic usage. To build and install the examples, set at least of the `EXAMPLES_ENABLE_<language>` options to `ON`, and set `EXAMPLES_INSTALL` to `ON`. Specify the installation path for the examples with the variable `EXAMPLES_INSTALL_PATH`. CMake will generate `CMakeLists.txt` configuration files (and `Makefile` files if on Linux/Unix) that reference the *installed* SUNDIALS headers and libraries.

Either the `CMakeLists.txt` file or the traditional `Makefile` may be used to build the examples as well as serve as a template for creating user developed solutions. To use the supplied `Makefile` simply run `make` to compile and generate the executables. To use CMake from within the installed example directory, run `cmake` (or `ccmake` or `cmake-gui` to use the GUI) followed by `make` to compile the example code. Note that if CMake is used, it will overwrite the traditional `Makefile` with a new CMake-generated `Makefile`.

The resulting output from running the examples can be compared with example output bundled in the SUNDIALS distribution.

---

**Note:** There will potentially be differences in the output due to machine architecture, compiler versions, use of third party libraries etc.

---

## 1.1.7 Configuring, building, and installing on Windows

CMake can also be used to build SUNDIALS on Windows. To build SUNDIALS for use with Visual Studio the following steps should be performed:

1. Unzip the downloaded tar file(s) into a directory. This will be the `SOLVERDIR`
2. Create a separate `BUILDDIR`
3. Open a Visual Studio Command Prompt and `cd` to `BUILDDIR`
4. Run `cmake-gui ../SOLVERDIR`
  - a. Hit Configure
  - b. Check/Uncheck solvers to be built
  - c. Change `CMAKE_INSTALL_PREFIX` to `INSTDIR`
  - d. Set other options as desired
  - e. Hit Generate
5. Back in the VS Command Window:

- a. Run `msbuild ALL_BUILD.vcxproj`
- b. Run `msbuild INSTALL.vcxproj`

The resulting libraries will be in the `INSTDIR`.

The SUNDIALS project can also now be opened in Visual Studio. Double click on the `ALL_BUILD.vcxproj` file to open the project. Build the whole *solution* to create the SUNDIALS libraries. To use the SUNDIALS libraries in your own projects, you must set the include directories for your project, add the SUNDIALS libraries to your project solution, and set the SUNDIALS libraries as dependencies for your project.

## 1.2 Installed libraries and exported header files

Using the CMake SUNDIALS build system, the command

```
$ make install
```

will install the libraries under `LIBDIR` and the public header files under `INCLUDEDIR`. The values for these directories are `INSTDIR/lib` and `INSTDIR/include`, respectively. The location can be changed by setting the CMake variable `CMAKE_INSTALL_PREFIX`. Although all installed libraries reside under `LIBDIR/lib`, the public header files are further organized into subdirectories under `INCLUDEDIR/include`.

The installed libraries and exported header files are listed for reference in the table below. The file extension `.LIB` is typically `.so` for shared libraries and `.a` for static libraries. Note that, in this table names are relative to `LIBDIR` for libraries and to `INCLUDEDIR` for header files.

A typical user program need not explicitly include any of the shared SUNDIALS header files from under the `INCLUDEDIR/include/sundials` directory since they are explicitly included by the appropriate solver header files (e.g., `sunlinsol_dense.h` includes `sundials_dense.h`). However, it is both legal and safe to do so, and would be useful, for example, if the functions declared in `sundials_dense.h` are to be used in building a preconditioner.

### 1.2.1 Using SUNDIALS as a Third Party Library in other CMake Projects

The `make install` command will also install a [CMake package configuration file](#) that other CMake projects can load to get all the information needed to build against SUNDIALS. In the consuming project's CMake code, the `find_package` command may be used to search for the configuration file, which will be installed to `instdir/SUNDIALS_INSTALL_CMAKEDIR/SUNDIALSConfig.cmake` alongside a package version file `instdir/SUNDIALS_INSTALL_CMAKEDIR/SUNDIALSConfigVersion.cmake`. Together these files contain all the information the consuming project needs to use SUNDIALS, including exported CMake targets. The SUNDIALS exported CMake targets follow the same naming convention as the generated library binaries, e.g. the exported target for CVODE is `SUNDIALS::cvtode`. The CMake code snipped below shows how a consuming project might leverage the SUNDIALS package configuration file to build against SUNDIALS in their own CMake project.

```
project(MyProject)

# Set the variable SUNDIALS_DIR to the SUNDIALS instdir.
# When using the cmake CLI command, this can be done like so:
#   cmake -D SUNDIALS_DIR=/path/to/sundials/installation

find_package(SUNDIALS REQUIRED)

add_executable(myexec main.c)

# Link to SUNDIALS libraries through the exported targets.
```

(continues on next page)

(continued from previous page)

```
# This is just an example, users should link to the targets appropriate
# for their use case.
target_link_libraries(myexec PUBLIC SUNDIALS::ccode SUNDIALS::nvecpetsc)
```

## B

BUILD\_ARKODE (*CMake option*), 6  
BUILD\_CVOICE (*CMake option*), 6  
BUILD\_CVODES (*CMake option*), 6  
BUILD\_FORTRAN\_MODULE\_INTERFACE (*CMake option*),  
10  
BUILD\_IDA (*CMake option*), 6  
BUILD\_IDAS (*CMake option*), 6  
BUILD\_KINSOL (*CMake option*), 6  
BUILD\_SHARED\_LIBS (*CMake option*), 6  
BUILD\_STATIC\_LIBS (*CMake option*), 6

## C

CALIPER\_DIR (*CMake option*), 16  
ccmake, 2  
cmake, 3  
CMAKE\_BUILD\_TYPE (*CMake option*), 6  
CMAKE\_C\_COMPILER (*CMake option*), 7  
CMAKE\_C\_EXTENSIONS (*CMake option*), 7  
CMAKE\_C\_FLAGS (*CMake option*), 7  
CMAKE\_C\_FLAGS\_DEBUG (*CMake option*), 7  
CMAKE\_C\_FLAGS\_MINSIZEREL (*CMake option*), 7  
CMAKE\_C\_FLAGS\_RELEASE (*CMake option*), 7  
CMAKE\_C\_STANDARD (*CMake option*), 7  
CMAKE\_CUDA\_ARCHITECTURES (*CMake option*), 9  
CMAKE\_CXX\_COMPILER (*CMake option*), 7  
CMAKE\_CXX\_EXTENSIONS (*CMake option*), 8  
CMAKE\_CXX\_FLAGS (*CMake option*), 7  
CMAKE\_CXX\_FLAGS\_DEBUG (*CMake option*), 7  
CMAKE\_CXX\_FLAGS\_MINSIZEREL (*CMake option*), 8  
CMAKE\_CXX\_FLAGS\_RELEASE (*CMake option*), 8  
CMAKE\_CXX\_STANDARD (*CMake option*), 8  
CMAKE\_Fortran\_COMPILER (*CMake option*), 8  
CMAKE\_Fortran\_FLAGS (*CMake option*), 8  
CMAKE\_Fortran\_FLAGS\_DEBUG (*CMake option*), 8  
CMAKE\_Fortran\_FLAGS\_MINSIZEREL (*CMake option*),  
8  
CMAKE\_Fortran\_FLAGS\_RELEASE (*CMake option*), 8  
CMAKE\_INSTALL\_LIBDIR (*CMake option*), 8  
CMAKE\_INSTALL\_PREFIX (*CMake option*), 8  
cmake-gui, 2

## E

ENABLE\_CALIPER (*CMake option*), 16

ENABLE\_CUDA (*CMake option*), 9  
ENABLE\_GINKGO (*CMake option*), 10  
ENABLE\_HYPRE (*CMake option*), 10  
ENABLE\_KLU (*CMake option*), 11  
ENABLE\_KOKKOS (*CMake option*), 10  
ENABLE\_KOKKOS\_KERNELS (*CMake option*), 10  
ENABLE\_LAPACK (*CMake option*), 11  
ENABLE\_MAGMA (*CMake option*), 11  
ENABLE\_MPI (*CMake option*), 12  
ENABLE\_ONEMKL (*CMake option*), 12  
ENABLE\_OPENMP (*CMake option*), 13  
ENABLE\_PETSC (*CMake option*), 13  
ENABLE\_PTHREAD (*CMake option*), 13  
ENABLE\_RAJA (*CMake option*), 13  
ENABLE\_SUPERLUDIST (*CMake option*), 14  
ENABLE\_SUPERLUMT (*CMake option*), 15  
ENABLE\_SYCL (*CMake option*), 15  
ENABLE\_XBRAID (*CMake option*), 9

EXAMPLES\_ENABLE\_CUDA (*CMake option*), 9  
EXAMPLES\_ENABLE\_CXX (*CMake option*), 9  
EXAMPLES\_ENABLE\_F2003 (*CMake option*), 9  
EXAMPLES\_INSTALL (*CMake option*), 9  
EXAMPLES\_INSTALL\_PATH (*CMake option*), 10

## G

Ginkgo\_DIR (*CMake option*), 10

## H

HYPRE\_INCLUDE\_DIR (*CMake option*), 11  
HYPRE\_LIBRARY (*CMake option*), 11

## K

KLU\_INCLUDE\_DIR (*CMake option*), 11  
KLU\_LIBRARY\_DIR (*CMake option*), 11  
Kokkos\_DIR (*CMake option*), 10  
KokkosKernels\_DIR (*CMake option*), 10

## L

LAPACK\_LIBRARIES (*CMake option*), 11

## M

MAGMA\_DIR (*CMake option*), 11  
MPI\_C\_COMPILER (*CMake option*), 12

MPI\_CXX\_COMPILER (*CMake option*), 12  
MPI\_Fortran\_COMPILER (*CMake option*), 12  
MPIEXEC\_EXECUTABLE (*CMake option*), 12

## O

ONEMKL\_DIR (*CMake option*), 12

## P

PETSC\_DIR (*CMake option*), 13  
PETSC\_INCLUDES (*CMake option*), 13  
PETSC\_LIBRARIES (*CMake option*), 13

## S

SUNDIALS\_BUILD\_WITH\_MONITORING (*CMake option*),  
16  
SUNDIALS\_BUILD\_WITH\_PROFILING (*CMake option*),  
16  
SUNDIALS\_F77\_FUNC\_CASE (*CMake option*), 16  
SUNDIALS\_F77\_FUNC\_UNDERSCORES (*CMake option*),  
16  
SUNDIALS\_GINKGO\_BACKENDS (*CMake option*), 10  
SUNDIALS\_INDEX\_SIZE (*CMake option*), 17  
SUNDIALS\_INDEX\_TYPE (*CMake option*), 17  
SUNDIALS\_INSTALL\_CMAKEDIR (*CMake option*), 17  
SUNDIALS\_LOGGING\_ENABLE\_MPI (*CMake option*), 16  
SUNDIALS\_LOGGING\_LEVEL (*CMake option*), 15  
SUNDIALS\_MAGMA\_BACKENDS (*CMake option*), 12  
SUNDIALS\_MATH\_LIBRARY (*CMake option*), 17  
SUNDIALS\_ONEMKL\_USE\_GETRF\_LOOP (*CMake option*),  
13  
SUNDIALS\_ONEMKL\_USE\_GETRS\_LOOP (*CMake option*),  
13  
SUNDIALS\_PRECISION (*CMake option*), 17  
SUNDIALS\_RAJA\_BACKENDS (*CMake option*), 13  
SUNDIALS\_SYCL\_2020\_UNSUPPORTED (*CMake option*),  
15  
SUPERLUDIST\_DIR (*CMake option*), 14  
SUPERLUDIST\_INCLUDE\_DIR (*CMake option*), 14  
SUPERLUDIST\_INCLUDE\_DIRS (*CMake option*), 14  
SUPERLUDIST\_LIBRARIES (*CMake option*), 14  
SUPERLUDIST\_LIBRARY\_DIR (*CMake option*), 14  
SUPERLUDIST\_OpenMP (*CMake option*), 14  
SUPERLUMT\_INCLUDE\_DIR (*CMake option*), 15  
SUPERLUMT\_LIBRARY\_DIR (*CMake option*), 15  
SUPERLUMT\_THREAD\_TYPE (*CMake option*), 15

## U

USE\_GENERIC\_MATH (*CMake option*), 17  
USE\_XSDK\_DEFAULTS (*CMake option*), 18

## X

XBRAID\_DIR (*CMake option*), 17  
XBRAID\_INCLUDES (*CMake option*), 18  
XBRAID\_LIBRARIES (*CMake option*), 18
