brcalymphnode	Coordinates and cell types in a histopathology slide of a breast cancer patient's lymph node

#### **Description**

Coordinates and cell types in a histopathology slide of a breast cancer patient's lymph node.

#### Usage

```
data("brcalymphnode")
```

#### **Format**

A data.frame.

#### **Details**

This dataset is used as an example in the 'Image data' chapter. See there for more details about it.

#### **Examples**

#### **Description**

This dataset is used as an example in the 'Multivariate methods for heterogeneous data' chapter.

#### Usage

```
data("ukraine_dists")
data("ukraine_coords")
```

#### Format

ukraine\_dists is an object of S3 class dist. ukraine\_coords is a tibble.

#### **Details**

The two datasets were constructed using the R code in the file 'ukraine-dists.R' in the 'scripts' directory of this package. Briefly, the city and place names are hardcoded in the script, coordinates were queried from OpenStreetMap using the geo function in the **tidygeocoder**, and pairwise geodesic distances computed using the geodist function from the eponymous package.
