

# Package ‘ROI.models.globalOptTests’

May 7, 2026

**Type** Package

**Title** 'ROI' Optimization Problems Based on 'globalOptTests'

**Version** 1.1-2

**Description** A collection of non-linear optimization problems with box bounds transformed into 'ROI' optimization problems.  
This package provides a wrapper around the 'globalOptTests' which provides a collection of global optimization problems.  
More information can be found in the 'README' file.

**Imports** ROI ( $\geq$  0.3-0), globalOptTests

**Suggests** Rglpk ( $\geq$  0.6-2)

**License** GPL-3

**RoxygenNote** 7.2.3

**NeedsCompilation** no

**Author** Florian Schwendinger [aut, cre]

**Maintainer** Florian Schwendinger <FlorianSchwendinger@gmx.at>

**Repository** CRAN

**Date/Publication** 2025-01-07 10:40:02 UTC

## Description

Get one or more optimization problems, meta information or a listing of the available globalOptTests problems.

**Usage**

```
globopt(x = c("all", "metainfo", "Ackleys", "AluffiPentini",
             "BeckerLago", "Bohachevsky1", "Bohachevsky2",
             "Branin", "Camel3", "Camel6", "CosMix2", "CosMix4",
             "DekkersAarts", "Easom", "EMichalewicz", "Expo",
             "GoldPrice", "Griewank", "Gulf",
             "Hosaki", "Kowalik", "LM1", "LM2n10",
             "LM2n5", "McCormic", "MeyerRoth", "MieleCantrell",
             "Modlangerman", "ModRosenbrock", "MultiGauss",
             "Neumaier2", "Neumaier3", "Paviani", "Periodic",
             "PowellQ", "PriceTransistor", "Rastrigin",
             "Rosenbrock", "Salomon", "Schaffer1", "Schaffer2",
             "Schubert", "Schwefel", "Shekel10", "Shekel5",
             "Shekel7", "Shekelfox5", "Wood", "Zeldasine10",
             "Zeldasine20"))
```

**Arguments**

x	a character giving the names of the optimization problems to be returned, if x is "all" all available problems are returned, if x is the name of a single problem the given problem is returned. If x is missing a listing of all available problems is returned. If x is "metainfo" the meta information about the problems is returned.
---	---

**Examples**

```
## list all available MIPLIB-2010 problems
globopt()
## get all miplib problems
globopt("all")
## get a single problem
globopt("MieleCantrell")
## get the meta information
globopt("metainfo")
```
