No scientific work proceeds without conceptual foundations. In language science, our concepts about language determine our assumptions, direct our attention, and guide our hypotheses and our reasoning. Only with clarity about conceptual foundations can we pose coherent research questions, design critical experiments, and collect crucial data. This series publishes short and accessible books that explore well-defined topics in the conceptual foundations of language science. The series provides a venue for conceptual arguments and explorations that do not require the traditional book-length treatment, yet that demand more space than a typical journal article allows.

## In this series:

1. Enfield, N. J. Natural causes of language.
2. Müller, Stefan. A lexicalist account of argument structure: Template-based phrasal LFG approaches and a lexical HPSG alternative.
3. Schmidtke-Bode, Karsten, Natalia Levshina, Susanne Maria Michaelis & Ilja A. Seržant (eds.). Explanation in typology: Diachronic sources, functional motivations and the nature of the evidence.
4. Morley, Rebecca L. Sound structure and sound change: A modeling approach.
5. Asoulin, Eran. Language and scientific explanation: Where does semantics fit in?
6. Boeckx, Cedric. Reflections on language evolution: From minimalism to pluralism.
7. Archangeli, Diana & Douglas Pulleyblank. Emergent phonology.
8. Lund, Kristine, Pierluigi Basso Fossali, Audrey Mazur & Magali Ollagnier-Beldame (eds.). Language is a complex adaptive system: Explorations and evidence.
